

Patient data					
Name	Mrs. G.SRAVANTHI		Patient ID	0162008290001	
Birthday	10/04/99		Sample ID	20027612	
Age at sample date	21.3		Sample Date	29/07/20	
Correction factors					
Fetuses	1	IVF	no	Previous trisomy 21	unknown
Weight	41	diabetes	no	pregnancies	
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	13 + 3	
PAPP-A	8.6 mIU/mL	6.08	Method	CRL Robinson	
fb-hCG	42.8 ng/ml	0.43	Scan date	29/08/20	
Risks at sampling date			Crown rump length in mm	75.1	
Age risk	1:915		Nuchal translucency MoM	0.97	
Biochemical T21 risk	<1:10000		Absent nasal bone	unknown	
Combined trisomy 21 risk	<1:10000		Sonographer	NA	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	NA	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 18					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
