

Patient data			
Name	Mrs. INDHU		Patient ID
Birthday	01/06/95	Sample ID	20015501
Age at sample date	25.3	Sample Date	31/08/20
Correction factors			
Fetuses	1	IVF	no
Weight	42	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	4.5 mIU/mL	0.59	12 + 6
fb-hCG	91.6 ng/ml	2.20	Method
			CRL Robinson
			Scan date
			31/08/20
Risks at sampling date			Crown rump length in mm
			67
Age risk			Nuchal translucency MoM
1:961			0.76
Biochemical T21 risk			Absent nasal bone
1:262			unknown
Combined trisomy 21 risk			Sonographer
1:1673			NA
Trisomy 13/18 + NT			Qualifications in measuring NT
<1:10000			NA
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1673 women with the same data, there is one woman with a trisomy 21 pregnancy and 1672 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 18			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
