| Patient data   |                         | Ultrasound data  |             |
| Name   | Mrs. MAHESHWARI FETUS-B | Gestational age at sample date   | 9 + 1       |
| Birthday   | 18-11-1991              | Method   | Scan        |
| Age at sample date   | 29.3                    | Scan date  | 20-02-2021  |
| Patient ID   | 0012102200411           |  |             |
| Correction factors   |                         |  |             |
| Fetuses  | 2                       | IVF  | no          |
| Weight in kg   | 64                      | diabetes   | no          |
| Smoker   | no                      | Origin   | Asian       |
|  |                         | Previous trisomy 21 pregnancies  | unknown     |
| Pregnancy data   |                         | Parameter  | Value       |
| Sample Date  |                         | 20-02-2021   | PAPP-A      |
|  |                         |  | 1.36mIU/mL  |
|  |                         | fb-hCG   | 79.41 ng/mL |
|  |                         |  | 0.48        |
| Corr. MoM  |                         |  |             |
| Risks at sampling date   |                         |  |             |
| Age risk at sampling date  |                         | 1:604  |             |
| Overall population risk  |                         | 1:600  |             |
| Trisomy 21   |                         | <1:10000   |             |
| Trisomy 13/18  |                         | <1:10000   |             |
| Risk   |                         | Trisomy 21   |             |
|  |                         | <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |             |
| Trisomy 13/18  |                         |  |             |
| <p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p> |                         |  |             |
