

Prisca

5.1.0.17

Date of report:

13/04/21

Patient data				
Name	Mrs. K LAVANYA FETUS-B		Patient ID	0012104111545
Birthday	30/12/92		Sample ID	21037196
Age at sample date	28.3		Sample Date	11/04/21
Gestational age	12 + 4			
Correction factors				
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies
Weight	55	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 3
PAPP-A	2.47 mIU/mL	0.30	Method	CRL Robinson
fb-hCG	48.32 ng/mL	0.52	Scan date	10/04/21
Risks at sampling date			Crown rump length in mm	62
Age risk	1:777		Nuchal translucency MoM	0.87
Biochemical T21 risk	1:773		Nasal bone	present
Combined trisomy 21 risk	1:4590		Sonographer	DR NA
Trisomy 13/18 + NT	1:3867		Qualifications in measuring NT	MD
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 4590 women with the same data, there is one woman with a trisomy 21 pregnancy and 4589 women with not affected pregnancies. The PAPP-A level is low. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:3867, which represents a low risk.
