ULTRASOUND

ULTRASOUND - NT SCAN

FINDINGS :

LMP: 08.03.2021

GA by LMP: 13 Weeks 5 Days.

Evidence of single live intrauterine gestation is noted in variable presentation.

CRL = 6.88 cm corresponding to 13 weeks 1 days.

EDD = 17.12.2021

Nuchal translucency is 1.4 mm.

Nasal bone seen well.

Ductus venosus Doppler flow is normal.

Visualized extent of fetal limbs are normal.

Normal cardiac situs. Stomach bubble seen.

Skull calvarium well formed.

Fetal movements are seen.

Fetal heart rate is 165 beats /min.

placenta-posterior, predominantly upper segment, grade 1 maturity

Cervical length is 3.5 cm. OS is closed.

IMPRESSION: Single live Intra -uterine pregnancy corresponding to 13 weeks 1 days.

Note: Increased Nuchal Translucency in isolation may not necessarily increase the risk for aneuploidy commonly seen in euploid fetuses. Nuchal Translucency alone, without being combined with serum markers, is not a significantly inferior performance characteristics for aneuploidy. Negative result for Nuchal Translucency completely reduce Risk for Aneuploidy. I declare that while conducting ultrasonography/image scanning MRS. ARCHANA, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.
