

Patient : Mrs. RAVEENA
Age/Gender : 24 Y/F
Patient ID : 0200040728
SID No : 0221046904
Ref.By : Dr. Anuradha Reddy B

Registered Date: 12-06-2021 / 12:08 PM
Print Date: 12-06-2021 / 03:59 PM

ULTRASOUND

ULTRASOUND - NT SCAN

FINDINGS :

LMP: 12.03.2021

GA by LMP: 13 Weeks 1 Day.

Evidence of single live intrauterine gestation is noted in variable presentation.

CRL = 7.30 cm corresponding to 13 weeks 4 days.

EDD = 14.12.2021

Nuchal translucency is 1.8mm.

Nasal bone seen well.

Ductous venosus Doppler flow is normal.

Visualized extent of fetal limbs are normal.

Normal cardiac situs. Stomach bubble seen.

Skull calvarium well formed.

Fetal movements are seen.

Fetal heart rate is 167 beats /min.

Placenta - Anterior, lower edge just above the internal os, grade 1 maturity

Cervical length is 3.2 cm. OS is closed.

IMPRESSION: Single live intra -uterine pregnancy corresponding to 13 weeks 4 days.

Note: Increased Nuchal Translucency in isolation may not necessarily increase the risk for aneuploidy & can commonly seen in euploid fetuses. Nuchal Translucency alone, without being combined with serum markers, has significantly inferior performance characteristics for aneuploidy. Negative result for Nuchal Translucency does not completely reduce Risk for Aneuploidy. I declare that while conducting ultrasonography/image scanning on Mrs. RAVEENA. I have neither detected nor disclosed the sex of her fetus to anybody in any manner
