

K.NAGESWARI RAO

Patient data			
Name	Mrs. P.SAMATHA		Patient ID
Birth day	03-08-1992		Sample ID
Age at sample date	29.0		Sample Date
Gestational age	12 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	63.1	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	2.47 mIU/mL	0.83	12 + 0
fb-hCG	59.87 ng/mL	1.29	Method
			CRL Robinson
			Scan date
			30-07-2021
			Crown rump length in mm
			56.6
			Nuchal translucency MoM
			0.87
			Nasal bone
			unknown
			Sonographer
			DR NA
			Qualifications in measuring NT
			MD
Risks at sampling date			
Age risk		1:710	
Biochemical T21 risk		1:1610	
Combined trisomy 21 risk		1:8265	
Trisomy 13/18 + NT		<1:10000	
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 8265 women with the same data, there is one woman with a trisomy 21 pregnancy and 8264 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
