

Patient data			
Name	Mrs. SNEHA		Patient ID
Birthday	24-05-1990		Sample ID
Age at sample date	31.4		Sample Date
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	59.6	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.3 mIU/mL	0.91	Method
fb-hCG	51.24 ng/mL	1.16	CRL Robinson
Risks at sampling date			Scan date
Age risk	1:527		16-10-2021
Biochemical T21 risk	1:1929		Crown rump length in mm
Combined trisomy 21 risk	1:7164		55
Trisomy 13/18 + NT	<1:10000		Nuchal translucency MoM
			1.03
			Nasal bone
			present
			Sonographer
			DR NA
			Qualifications in measuring NT
			MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 7164 women with the same data, there is one woman with a trisomy 21 pregnancy and 7163 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
