

K.SOWMYA REDDY

Patient data			
Name	Mrs. K.BHARANI FETUS-A		Patient ID
Birth day	08-07-1988		Sample ID
Age at sample date	33.3		Sample Date
Gestational age	13 + 0		
Correction factors			
Fetuses	2	IVF	yes
Weight		diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	7.82 mIU/mL	0.80	13 + 0
fb-hCG	45.23 ng/mL	0.49	Method
Risks at sampling date			CRL Robinson
Age risk	1:389		Scan date
Biochemical T21 risk	1:6611		08-11-2021
Combined trisomy 21 risk	<1:10000		Crown rump length in mm
Trisomy 13/18 + NT	<1:10000		69
			Nuchal translucency MoM
			1.09
			Nasal bone
			present
			Sonographer
			DR NA
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
