

Patient data								
Name		Mrs. BHAKTI JOSHI		Patient ID	0352202120095			
Birthday		15/04/92		Sample ID	23127107			
Age at sample date		29.8		Sample Date	12/02/22			
Gestational age		12 + 0						
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	81.2	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	1.78 mIU/mL	0.81	Gestational age 11 + 4					
fb-hCG	52.32 ng/mL	1.21	Method CRL Robinson					
Risks at sampling date								
Age risk		1:646	Scan date 09/02/22					
Biochemical T21 risk		1:1622	Crown rump length in mm 50					
Combined trisomy 21 risk		1:8758	Nuchal translucency MoM 0.59					
Trisomy 13/18 + NT		<1:10000	Nasal bone present					
			Sonographer DR C VENU GOPAL					
			Qualifications in measuring NT MBBS DMRD					
Trisomy 21								
<p>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 8758 women with the same data, there is one woman with a trisomy 21 pregnancy and 8757 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
<p>The graph illustrates the calculated risk for Trisomy 21 as a function of age. The x-axis represents age, and the y-axis represents risk. The curve starts at a risk of 1:10000 at age 13 and rises sharply, crossing the 'Cut off' point at age 29. The area under the curve is shaded in green (below cut off), yellow (between cut off and age risk), and red (above age risk). The 'Cut off' point is marked at age 29 and a risk of 1:10000.</p>								
Trisomy 13/18 + NT								
<p>The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.</p>
