The chart shows a red area at the top, a yellow area in the middle, and a green area at the bottom. A vertical line at age 27 is within the green area. The y-axis is labeled with 1:10, 1:100, 1:250, 1:1000, and 1:10000. The x-axis is labeled with ages 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49. A label 'Cut off' is near the yellow-green boundary.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 6196 women with the same data, there is one woman with a trisomy 21 pregnancy and 6195 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
