

Patient data			
Name	Mrs. SAKSHI KUTE	Patient ID	0352204180028
Birthday	06-01-1998	Sample ID	23288393
Age at sample date	24.3	Sample Date	15-04-2022
Gestational age	12 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	72.7	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.96 mIU/mL	0.55	12 + 4
fb-hCG	39.55 ng/mL	1.09	Method
			CRL Robinson
			Scan date
			13-04-2022
			Crown rump length in mm
			64
			Nuchal translucency MoM
			0.91
			Nasal bone
			unknown
			Sonographer
			DR NA
			Qualifications in measuring NT
			MD
Risks at sampling date		Trisomy 21	
Age risk	1:1001	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 6429 women with the same data, there is one woman with a trisomy 21 pregnancy and 6428 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:1232		
Combined trisomy 21 risk	1:6429		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
