Age:	21 Years	Sex:	FEMALE
Ref.Physician:	MEDISURE DIAGNOSTIC	Study Date:	14-04-2022
Modality:	USG	Study:	NECK

ULTRASOUND NECK (THYROID GLAND)

FINDINGS:

Right thyroid gland measuring 4.1 x 1.5 x 3.5cms. There are few well defined nodules are seen within the gland, largest measuring 2.2 x 2.1 x 1.2cms with mild hyperechoic with few cystic changes. No evidence of calcifications are seen.

Left thyroid gland measuring 1.2 x 0.9 x 0.5cms.

Isthmus measuring 2.6mm.

No evidence of enlarged lymph nodes seen.

The bilateral carotid vasculature appears normal.

IMPRESSION:

Enlarged right lobe of the thyroid gland.

Few well defined nodules seen with in the right thyroid gland with mild hyperechoic with few cystic changes—likely multinodular goitre.

For clinical and Thyroid profile and FNAC correlation.
