

Patient data			
Name	Mrs. PRATHYUSHA	Patient ID	0322205110007
Birthday	28-08-1990	Sample ID	23307765
Age at sample date	31.7	Sample Date	11-05-2022
Gestational age	13 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	45	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	6.39 mIU/mL	0.91	
fb-hCG	39.52 ng/mL	1.00	
Risks at sampling date			
Age risk		1:520	
Biochemical T21 risk		1:2677	
Combined trisomy 21 risk		<1:10000	
Trisomy 13/18 + NT		<1:10000	
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
The graph shows the relationship between Age (X-axis, 13 to 49) and Risk (Y-axis, 1:10 to 1:10000). The graph is divided into three colored regions: green (below cut off), yellow (Below Cut Off, but above Age Risk), and red (above cut off). A black vertical bar indicates the patient's risk at age 31.7, which is in the green region.			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
