Patients Name: Mrs Padma Narendra Pandam
Referred By: Dr. Manasi Thakur

Age/Sex: 37 Years /F
Date: 23/05/2022

SONOGRAPHY OF GRAVID UTERUS

LMP: 17/02/2022

EDD: 24/11/2022

DOB: 14/10/1984

GEST AGE: 13W 4D

wt - 56 kg, Ht 4.10

Single live intrauterine pregnancy is seen with normal demonstrable cardiac activity.
FHR - 160 bpm

The Placenta is developing normally.

The internal os is closed.

The cervical length is 3.4 cm.

The choroid plexus, heart and the small bowel do not show any soft marker.

The brainstem, intracranial lucency and the cisterna magna appear normal.

CRL	GA	NT	Nasal bone	Tricuspid flow	Ductus Venosus
61.9 mm	12W4D	2.5 mm	Normal	Normal	Normal

OPINION:

Features are suggestive of single live intrauterine pregnancy with CGA of 13W 4Ds. The NT (95th centile) and IT (Intracranial translucency) measurement are within normal range. The choroid plexus and fetal bowel appears normal. There is no demonstrable tricuspid regurgitation. No demonstrable soft markers are seen at present. The cervical length is within normal range with closed internal os. The placentation is normal. No retro-placental fluid is seen.

All measurements including estimated foetal weight, are subject to statistical variations.

Not all anomalies can be detected on sonography.

I declare that while undergoing ultrasonography scanning on patient, I have neither detected nor disclosed the sex of the fetus to anybody in any manner.
