Dr. Mrs. Shobha Gandhi
M.D.

ULTRASOUND EXAMINATION DURING PREGNANCY :- (N.T. Scan)
(Performed on Accuvix Colour-Doppler Machine.)

There is a single intrauterine live foetus with vertex presentation. Spine is posterior.

B.P.D. is 2.53 cms. & Femoral length is 1.44 cms. & C.R.L. is 8.02 cms.
Averaging these parameters the gestational age is about 14 weeks 2 days
± 7 days & projected date of delivery is 09.11.2022.

Foetal heart rate is 160 beats per minute & regular.

Foetal body and limb movements are normal.

Placenta is forming in upper segment and on anterior wall. It shows grade I maturity.

Amniotic fluid volume is adequate for the period of gestation.

Foetal spine, skull, thorax, abdomen & visualised limbs do not show any demonstrable anomaly at present in level I sonography.

N.T. is 0.5 m.ms. Nasal bones are well formed. Ductus venosus shows normal flow pattern.

Length of cervix is (3.22 cms) adequate & internal os is closed.

OPINION :-

Single intrauterine live foetus with vertex presentation.

Gestational age is about 14 weeks and 2 days ± 7 days.

Placenta is forming in upper segment & amniotic fluid volume is adequate.

No demonstrable anomaly seen at present.

Clinical correlation & follow-up is suggested.

I declare that while conducting ultrasonography/image scanning on this patient
I have neither detected nor disclosed the sex of her foetus to any body in any manner.
