

**USG - EARLY OBG WITH NT SCAN**

NAME OF PATIENT: MRS. JAYSHREE GHAGRE  
AGE : 20Y/F  
DATE : 02/06/2022  
REF. BY : DR. JYOTI YADAV

LMP: 23/02/2022 MENSTRUAL AGE: 14 WEEKS 1 DAY

Single intrauterine gestation sac noted.  
Fetal poles visualized.  
Regular cardiac activity noted. Heart rate- 161 bpm.

CRL: 8.2 cm- 13 weeks 6 days  
Sonic Gestational Age: 13 weeks 6 days  
Sonic EDD : 02/12/2022  
EDD (LMP) : 30/11/2022

Nuchal translucency- 1.3 mm.  
Nasal bone seen. Ductus venosus shows normal triphasic wave form.  
Limb buds appears normal.  
Liquor is adequate for gestational age.  
Cervical length 3 cm & internal OS is normal appearing.  
Adnexae reveals no abnormality.

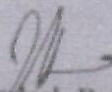

**OPINION:** - Sonographic study reveals -

- ☐ Single live intrauterine fetus of sonic AGA - 13 weeks 6 days near corresponding with menstrual age.
  - ☐ No sonographic abnormality noted at present scan for current fetal position and gestational age.
- Suggested clinical, laboratory correlation and follow up scan.

I, Dr. Kamlesh Bagde declare that, while conducting ultrasonography on above patient, have neither detected nor disclosed the sex of the foetus to anybody in any manner.

Thanks for referral.

Note: All measurements including estimated foetal weight are subject to statistical variations. The gray scale 2D ultrasonography has its limitations and hence all congenital anomalies cannot be ruled out on this report alone and further evaluation is desirable.
