NARNAWARE

EYE CLINIC & SONOGRAPHY CENTRE

Opp. State Bank of India, 'Gulbakshi', Teacher's Colony, Girad Road, Umrer

USG – Early OBSTETRIC

Date : 28th May, 2022
Name of Patient : Mrs. Meenal Bhambode 26 Yrs/F
Ref. by : Dr. B. Wanjari Madam

LMP: 03/03/2022

Menstrual Age: 3rd month

Single intrauterine gestation sac with single foetus showing regular cardiac activity

Foetal yolk sac is seen at present.

Foetal heart rate regular and is normal. FHR: 166 beats/min

CRL : 1.8cms
Sonic Gestational Age : 8wks2days
LMP Gestational Age : 12wks2days
Sonic EDD : 05/01/2023 (+/- 15 days)
LMP EDD : 08/12/2022

23028823

Liquor is adequate for gestational age.

Placenta: Anterior

No obvious intra or retro placental haemorrhage seen at present

Cervical length appears normal & internal OS appears closed.

OPINION: -

Sonography study reveals –

- ☐ Single live intrauterine foetus of sonic GA – 8wks2days
- ☐ Delayed conception

I Declare that while undergoing ultrasonography image scanning on pregnant patient, neither detected nor disclose the sex of her fetus to anybody in any manner

Adv: Anomalies scan at 20wks.

Dr. Harshal Narnaware MBBS, DMRD
Consultant Radiologist & Sonologist

Note: All congenital anomalies can not be ruled out in single scan & present fetal position.
All measurements including estimated fetal weight are subject to statistical variations.
Report is not for MLC Purpose
