

Patient data								
Name	Mrs. S.ANITHA	Patient ID	0352206220104					
Birthday	14/10/94	Sample ID	22664903					
Age at sample date	27.7	Sample Date	22/06/22					
Gestational age	12 + 5							
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	56	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	3.08 mIU/mL	0.66	Gestational age 12 + 4					
fb-hCG	49.88 ng/mL	1.22	Method CRL Robinson					
Risks at sampling date								
Age risk	1:822		Scan date 21/06/22					
Biochemical T21 risk	1:1274		Crown rump length in mm 63.28					
Combined trisomy 21 risk	1:1682		Nuchal translucency MoM 1.35					
Trisomy 13/18 + NT	<1:10000		Nasal bone unknown					
Sonographer DR NA								
Qualifications in measuring NT MD								
Trisomy 21								
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. <p>After the result of the Trisomy 21 test (with NT) it is expected that among 1682 women with the same data, there is one woman with a trisomy 21 pregnancy and 1681 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
<p>The graph illustrates the calculated risk for Trisomy 21 as a function of age. The x-axis represents age from 13 to 49, and the y-axis represents risk. The curve starts at a risk of 1:10000 at age 13, rises to a 'Cut off' point at age 27, and then remains below the 1:100 risk threshold. The area under the curve is shaded in green (below cut off), yellow (between cut off and age risk), and red (above age risk).</p>								
Trisomy 13/18 + NT								
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
