

Patient data			
Name	Mrs. BHEEMESHWARI		Patient ID
Birthday	15-06-2002		Sample ID
Age at sample date	20.1		Sample Date
Gestational age	11 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	35	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	2.63 mIU/mL	0.55	11 + 3
fb-hCG	51.22 ng/mL	0.81	Method
			CRL Robinson
			Scan date
			05-07-2022
Risks at sampling date			Crown rump length in mm
			48
Age risk			Nuchal translucency MoM
1:1051			1.07
Biochemical T21 risk			Nasal bone
1:2499			present
Combined trisomy 21 risk			Sonographer
1:8982			DR NA
Trisomy 13/18 + NT			Qualifications in measuring NT
<1:10000			MD
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 8982 women with the same data, there is one woman with a trisomy 21 pregnancy and 8981 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
