Age risk at sampling date	1:959	Trisomy 21	1:957
Overall population risk	1:600	Trisomy 13/18	<1:10000
Risk		Trisomy 21	
The chart shows a red area (above cut-off) from 13 to 27 weeks, a yellow area (below cut-off but above age risk) from 27 to 49 weeks, and a green area (below cut-off) from 13 to 27 weeks. A vertical line at 27 weeks indicates the current risk level.		The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 957 women with the same data, there is one woman with a trisomy 21 pregnancy and 956 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!	
Trisomy 13/18			
The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.
