

USG - EARLY OBG WITH NT SCAN

NAME OF PATIENT: MRS. SHAKUNTALA DEVTULE

AGE : 31Y/F

DATE : 17/09/2022

REF. BY : DR. SWATI CHALKHOR

23383724

LMP 20/06/2022

MENSTRUAL AGE: 12 WEEKS 5 DAYS

Single intrauterine gestation sac noted.

Fetal poles visualized.

Regular cardiac activity noted. Heart rate- 153 bpm.

Height - 169-D

CRL: 6.5 cm- 12 weeks 4 days

WT - 58 Kg

Sonic Gestational Age: 12 weeks 4 days

Lmp - 20 JUNE 22

Sonic EDD : 28/03/2023

EDD (LMP) : 27/03/2023

DOB - 05/06/1991

Nuchal translucency- 1.3 mm.

Nasal bone seen. Ductus venosus shows normal triphasic wave form.

Limb buds appears normal.

Liquor is adequate for gestational age.

Cervical length 3.8 cm & internal OS is normal appearing.

Adnexae reveals no abnormality.

OPINION: - Sonographic study reveals -

Single live intrauterine fetus of sonic AGA - 12 weeks 4 days near corresponding with menstrual age.

No sonographic abnormality noted at present scan for current fetal position and gestational age.

Suggested clinical, laboratory correlation and follow up scan.

I, Dr. Kamlesh Bagde declare that, while conducting ultrasonography on above patient, have neither detected nor disclosed the sex of the foetus to anybody in any manner.

Thanks for referral.

Note: All measurements including estimated foetal weight are subject to statistical variations. The gray scale 2D ultrasonography has its limitations and hence all congenital anomalies cannot be ruled out on this report alone and further evaluation is desirable.
