Condition	Background risk	Adjusted risk
Trisomy 21	1: 932	1: 4661
Trisomy 18	1: 2190	1: 6635
Trisomy 13	1: 6892	<1: 20000
Preeclampsia before 34 weeks		1: 510
Fetal growth restriction before 37 weeks		1: 114

The background risk for aneuploidies is based on maternal age (25 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler.

All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The estimated risk is calculated by the FMF-2012 software (version 2.81) and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK Registered charity 1037116). The risk is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see www.fetalmedicine.com).

Comments

Single live intra uterine fetus corresponding to 12 weeks 3 days.

Down syndrome screen negative based on NT scan.

NASAL BONE CAN NOT EXAMINE.

Suggested DOUBLE MARKER.

Suggested TIFFA SCAN at 19 to 20 weeks. (NOV 14TH TO 16TH)

I, Dr. L. Kalpana reddy, declared that while conducting ultrasonography / imaging scanning on Mrs. SUVARTHA, I have neither detected nor disclosed the sex of fetus to any body in any manner.
