

Patient data				
Name	Mrs. REVATHI FETUS A		Patient ID	0012209280357
Birthday	02-02-1986		Sample ID	23831092
Age at sample date	36.7		Sample Date	28-09-2022
Gestational age	12 + 1			
Correction factors				
Fetuses	2	IVF	yes	Previous trisomy 21 pregnancies
Weight	46	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 0
PAPP-A	7.96 mIU/mL	0.93	Method	CRL Robinson
fb-hCG	48.99 ng/mL	0.45	Scan date	27-09-2022
Risks at sampling date			Crown rump length in mm	56
Age risk	1:183		Nuchal translucency MoM	0.88
Biochemical T21 risk	1:5146		Nasal bone	unknown
Combined trisomy 21 risk	<1:10000		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	NA
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
