ULTRASONOGRAPHY OF GRAVID UTERUS (NT SCAN)

This examination shows a single viable foetus in variable position.

The placenta is posterior in position in upper segment and of grade I maturity.

The cervical length measures 4.2 cm. The internal os is closed.

Amount of amniotic fluid is adequate for this period of gestation.

Fetal cardiac activity and movements are present.

The crown rump length (CRL) of fetus is 72.1 mm corresponding to 13 weeks 3 days of gestational age.

The Nuchal translucency is normal and measures 1.3 mm.

Foetal limbs are seen.

The nasal bone is ossified.

The ductus venosus shows a normal spectral waveform.

The expected date of delivery (E.D.D) according to this ultrasound examination is 01/04/2023.

Average uterine artery PI is 1.25 (19 Percentile).

IMPRESSION:

The ultrasound examination reveals a single viable intrauterine pregnancy of approx 13 weeks 3 days.

Normal nuchal translucency.

DOB - 24/10/1988

WT - 54 kg.
