TRISOMY 21 SCREENING

The calculated risk for Trisomy 21 is above the cut off which represents an increased risk.

After the result of the Trisomy 21 test it is expected that among 103 women with the same data, there is one woman with a trisomy 21 pregnancy and 102 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.

Please note that risk calculations are statistical approaches and have no diagnostic value!

The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.
