

Patient data			
Name	Ms. CHINMAYI		Patient ID
Birthday	25-09-1995		Sample ID
Age at sample date	27.1		Sample Date
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	64	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.57 mIU/mL	0.21	11 + 5
fb-hCG	49.66 ng/mL	1.04	Method
			CRL Robinson
			Scan date
			20-10-2022
Risks at sampling date			Crown rump length in mm
Age risk			52.3
Biochemical T21 risk			Nuchal translucency MoM
1:63			1.00
Combined trisomy 21 risk			Nasal bone
1:329			unknown
Trisomy 13/18 + NT			Sonographer
1:1395			NA
			Qualifications in measuring NT
			NA
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 329 women with the same data, there is one woman with a trisomy 21 pregnancy and 328 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:1395, which represents a low risk.
