OPINION: -

Sonography study reveals -

Single live intrauterine fetus of sonic GA -13 weeks 4 days near corresponding with menstrual age.

At present no sonographic abnormality noted.

I, Dr. Manish G. Atey declare that, while conducting ultrasonography on above patient, have neither detected nor disclosed the sex of the foetus to anybody in any manner.

Thanks for referral.

Note: All measurements including estimated foetal weight are subject to statistical variations. The gray scale 2D ultrasonography has its limitations and hence all congenital anomalies cannot be ruled out on this report alone and further evaluation is desirable.
