డా॥ మూల అపర్న రెడ్డి

Reg. No. 51278

PT'S NAME: SHABANA AGE: 23 Y/F DATE: 22.10.2022

REF BY DR: TRIVENI MS OBG

EARLY OBG SCAN WITH NT

Uterus bulky with single regular gestational sac
Yolk sac present.
Fetal pole present.
Fetal movements present.
Fetal cardiac activity present FHR : 156 BPM.
Placenta anterior grade 0 lower segment

CRL : 5.29 cm 12 weeks 0 days.
EDD : 06/05/2023
NT : 1.20 mm (within normal limits)
Nasal bone : 0.21 cm.
CX : 3.2 cm

Visualised fetal parts appear normal

Ductus venous doppler show normal forward wave form with spectral pattern without reversal.

Tricuspid shows normal forward flow no regurgitation

Both uterine arteries show normal colour flow & spectral pattern.
E/o end diastolic notches seen ? physiological

Impression : Early gestation of 12 weeks 0 days gestational age with normal NT and normal DV,TV, Uterine arteries spectral forms
advised double marker

DR. RAPARNA
RADIOLOGIST

I Dr.RAPARNA declare that while conducting USG on SHABANA 23 Y/F I have neither detected nor disclosed the sex of the fetus to anybody in any manner. Note: all anomalies cannot be ruled out by ultra sound, since assessment of fetal anomalies depends on fetal position, liquor volume and period of gestation at the time of scan. USG has its own limitations. Please interpret clinically. Thanks for referral.

ప్రభుత్వ ఉద్యోగులకు వన్స్ నర్సరీలకు రియంబర్స్ మెంట్ సౌకర్యము కలదు.
None : The science of the radiological diagnosis is based on the interpretation of various shadows produced by both soft and hard tissues. It is not possible to rule out all anomalies. The radiologist is not responsible for confirmation for the diagnosis and for the management of the patient. The radiologist is not responsible for possibilities and number of variables known & unknown in some of the various possibilities.
