

Prisca

5.1.0.17

Date of report:

07-11-2022

Patient data			
Name	Mrs. SHAHANA BEGUM		Patient ID
Birthday	12-09-1997		Sample ID
Age at sample date	25.1		Sample Date
Gestational age	11 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	55	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.84 mIU/mL	0.33	12 + 0
fb-hCG	52.32 ng/mL	0.93	Method
			CRL Robinson
			Scan date
			07-11-2022
Risks at sampling date			Crown rump length in mm
			55.4
Age risk			Nuchal translucency MoM
1:912			0.68
Biochemical T21 risk			Nasal bone
1:401			present
Combined trisomy 21 risk			Sonographer
1:2642			NA
Trisomy 13/18 + NT			Qualifications in measuring NT
<1:10000			NA
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2642 women with the same data, there is one woman with a trisomy 21 pregnancy and 2641 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
