FETAL ECHO NOT DONE

I Dr. PRADIP BORKAR declare that while undergoing ultrasonography/image scanning on patient neither detected nor disclose the sex of foetus to anybody in any manner.

All measurements including estimated fetal weight are subject to statistical variations

Not all anomalies can be detected on sonography. Detection of anomalies is dependent on fetal position, gestational age. Maternal abdominal obesity and other technical parameters. Follow up scanning and second opinion are always advisable. For detection of cardiac anomaly foetal echography is necessary.

Chromosomal anomalies need chorionic villus sampling for diagnosis.
