NAME: MRS.MONIKA NIKHADE  
REF BY:DR.BORKAR

DATED: 23 November 2022  
AGE/SEX: 26YRS / F

**OBSTETRIC SONOGRAPHY REPORT**

LMP:23/08/2022

GEST AGE: 13WKS 1DAYS

EDD:30/05/2023

- Uterus is bulky and shows Single live intrauterine gestation.
- The CRL measures 6.41cm and corresponds to the gestational age of 12wks 6days.
- Fetal cardiac activity is appreciated (130bpm). Yolk sac is seen.
- Nasal bone is visualized. Nuchal translucency is normal in size (0.24cm).
- Intracranial translucency appears normal.
- Calvarium is seen in present scan.
- Placenta is developing globally. No retro chorionic hematoma/collection.
- Cervix measures 3.5cm and is normal in length.
- On Doppler study, mean PI of uterine artery is 1.4 and is normal for gestation.

To rule out foetal anomalies, scan at 18-22 wks is advisable.

**OPINION:**

SINGLE LIVE INTRAUTERINE FOETUS WITH SONIC MATURITY OF 12-13 WKS.

SONIC EDD - 01/06/2023

CRL	NT	PERCENTILE
6.41	0.24	90

(Ref - FMF calculator)

All measurements including estimated foetal weight, are subject to statistical variations.

Not all anomalies can be detected on sonography. Much of them depends on fetal position at the time of sonography.  
I have neither detected nor disclosed sex of fetus to anybody in any manner.
