RTC Colony, Railway Station Road, Nalgonda, 508001, Telangana, India.

NAME: K LAXMI PRASANNA	AGE: 28 /Y	SEX: FEMALE
REF BY: DR. E SINDHURA	OP NO: —	DATE: 29-10-2022

ULTRASOUND PREGNANCY NT SCAN

No. of foetuses: Single

Foetal position: Transverse lie

Foetal heart : Pulsations present, FHR - 160Bpm, regular.

Placenta : Anterior/ upper/ segment/ grade 0 maturity.

Amniotic fluid : Adequate liquor.

BIOMETRY

CRL : 5.93 cm 12 w 3 d

GA by Ultrasound : 12 WEEKS 3 DAYS

EDD by Ultrasound : 10-05-2023

TARGETED IMAGING FOR FETAL ANOMALIES (TIFFA):

Head:

* Midline falx - Normal

— Both lateral ventricles show normal symmetrical choroids plexus.

Face:

Early fetal face appears normal.

Nasal bone visualized.

SINDHURA Hospital

Healing for the Life

RTC Colony, Railway Station Road, Nalgonda, 508001, Telangana, India.

N. T. : 1.7 mm (within normal limits).

Thorax:

Heart - Position and axis normal.

Lungs - Normal.

Abdomen:

Stomach - Normal.

Bowel - Normal.

Abdominal wall - Normal.

Limbs:

Both upper and lower limbs are normal.

Foetal movements are normal.

Umbilical cord normal. vessel chord seen. Cord, insertion normal.

Cervix length 3.5 cm Os closed. No funelling.

Increased PI noted in left uterine artery.

IMPRESSION :

1) SINGLE, VIABLE, INTRAUTERINE, FOETUS OF GESTATIONAL AGE OF 12 WEEKS 3 DAYS.

2) NORMAL NT SCAN.

Advise second trimester TIFFA at 18 - 20 weeks.

Consultant Radiologist

Dr. Vinutha Reddy

SINDHURA HOSPITAL

Dr. K. Vinutha Reddy

While ultrasound can provide very valuable information about pregnancies and can detect many abnormalities in the foetus, it cannot give a definite answer to every problem on every occasion. Ultrasound cannot guarantee that a baby will be normal in every detail. Scanning conditions may be suboptimal due to various constraints including obesity, abdominal scars and inappropriate foetal position. Even in the best hands, a small percentage of foetal anomalies, in particular certain heart and limb defects, can remain undetectable.
