First Trimester Screening Report

Kalpana Fetal Medicine and Scan Centre

Protecting the Pre

MRS SRAVANI

Date of birth : 09 August 2001, Examination date: 06 December 2022

Address SRINAGAR COLONY
NALGONDA

Hospital no.: KFC1565

Mobile phone: 6281819735

Referring doctor: TRIVENI

Maternal / Pregnancy Characteristics:

Racial origin: South Asian (Indian, Pakistani, Bangladeshi).

Parity: 0.

Maternal weight: 55.0 kg; Height: 152.0 cm.

Smoking in this pregnancy: no; Diabetes Mellitus: no; Chronic hypertension: no; Systemic lupus erythematosus: no; Antiphospholipid syndrome: no; Patient's mother had preeclampsia: no.

Method of conception: Spontaneous;

Last period: 06 September 2022

EDD by dates: 13 June 2023

First Trimester Ultrasound:

US machine: E 6. Visualisation: good.

Gestational age: 13 weeks + 0 days from dates

EDD by scan: 13 June 2023

Findings	Alive fetus
Fetal heart activity	visualised
Fetal heart rate	142 bpm
Crown-rump length (CRL)	64.0 mm
Nuchal translucency (NT)	1.7 mm
Biparietal diameter (BPD)	20.8 mm
Ductus Venosus PI	1.100
Placenta	posterior low
Amniotic fluid	normal

Chromosomal markers:

Nasal bone: present; Tricuspid Doppler: normal.

Fetal anatomy:

Skull/brain: appears normal; Spine: appears normal; Heart: Appears normal; Abdominal wall: appears normal; Stomach: visible; Bladder / Kidneys: visible; Hands: both visible; Feet: both visible.

Uterine artery PI: 1.60 equivalent to 0.980 MoM

Endocervical length: 30.0 mm

Risks / Counselling:

Patient counselled and consent given.

Operator: Lekkala Kalpana, FMF Id: 173593

Condition	Background risk	Adjusted risk
Trisomy 21	1: 1078	1: 14321
Trisomy 18	1: 2634	1: 12397
Trisomy 13	1: 8261	<1: 20000
Preeclampsia before 34 weeks		1: 368

1st Trimester Screening Report

Kalpana Fetal Medicine and Scan Center

Protecting the Precious...

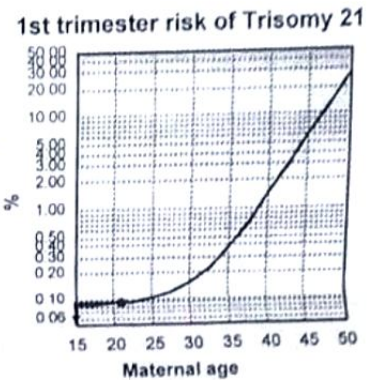

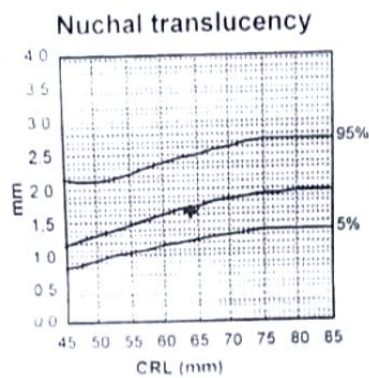

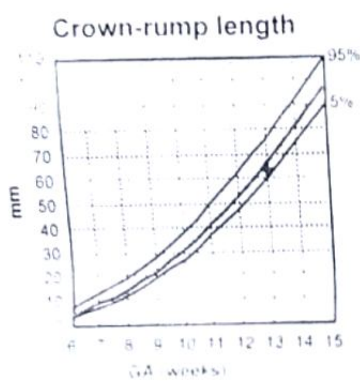

1: 128

Fetal growth restriction before 37 weeks

The background risk for aneuploidies is based on maternal age (21 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, nasal bone, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler. All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The risk calculation is performed by the FME 2012 software (version 2.81) and is based on findings from the Fetal Medicine Foundation (UK Registered charity). The scan is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see www.fetalmedicine.com).

Comments

Single live intra uterine fetus corresponding to 13 weeks 0 days.

Down syndrome screen negative based on NT scan.

Suggested **DOUBLE MARKER**.

Suggested **TIFFA SCAN** at 19 to 20 weeks. (Jan 17th to 21st)

I, Dr. L. Kalpana Reddy, declared that while conducting ultrasonography / imaging scanning on Mrs. SRAVANI, I have neither detected nor disclosed the sex of fetus to any body in any manner.
