OBSTETRIC USG REPORT

Patient Name	Manjushri Avinash Raipure	Ref By	Self	Date	09/12/2022
--------------	---------------------------------	--------	------	------	------------

Positive intrauterine pregnancy.
Appropriate amount of amniotic fluid.
Normal fetal cardiac activity.
Body and limb movements normal.
Cervix is closed
Gestational age - 5.7.22
USG parameters -

EDD According to USG : 2.6.23

D	<u>2.9 cm</u>	<u>15.2 wks</u>
C	<u>10.4 cm</u>	<u>15.2 wks</u>
AC	<u>8.7</u>	<u>15 wks</u>
FL	<u>1.7 cm</u>	<u>15 wks</u>
Doppler uterine artery	<u>normal</u>	
Doppler Umbilical artery		

Average gestational age by USG parameters 16 wks weeks

Estimated fetal weight 113 gm

Congenital anomalies not detected.

All congenital anomalies cannot be detected by this study in a single scan, in present fetal position.

Findings are conditional to machine resolution.

Placenta posterior in location with grade 1 maturity.

Impression - Single live fetus with breech presentation is seen.

I declare that while undergoing the ultrasound examination I have neither declared nor disclosed the sex of the fetus to anybody in any manner

This is a growth scan at this gestational age it is not possible to rule out or visualize all fetal anomalies. Ultrasound examination has limitations due to mechanical factors, maternal factors like amount of liquor, obesity, previous scar, advanced gestational age etc. Fetal conditions like multiple pregnancies, fetal positions, late appearance of few anomalies etc. The opinion reported is based on data generated by computer, clinical correlation is required for deciding a treatment plan
