

Patient data					
Name	Mrs. R,SREE LEKHA TWIN A		Patient ID	0042212150004	
Birthday	05/06/99		Sample ID	A2679886	
Age at sample date	23.5		Sample Date	15/12/22	
Gestational age	12 + 1				
Correction factors					
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	45	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	12 + 1	
PAPP-A	2.11 mIU/mL	0.24	Method	CRL Robinson	
fb-hCG	51.22 ng/mL	0.47	Scan date	15/12/22	
Risks at sampling date			Crown rump length in mm	58.4	
Age risk	1:1001		Nuchal translucency MoM	0.52	
Biochemical T21 risk	1:637		Nasal bone	unknown	
Combined trisomy 21 risk	1:4145		Sonographer	NA	
Trisomy 13/18 + NT	1:1631		Qualifications in measuring NT	NA	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 4145 women with the same data, there is one woman with a trisomy 21 pregnancy and 4144 women with not affected pregnancies. The PAPP-A level is low. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:1631, which represents a low risk.
