NAME: K MOURUKA	AGE: 25 / Y	SEX: FEMALE
REF BY: DR. E SINDHURA	OP NO: -	DATE: 27-12-2022

ULTRASOUND PREGNANCY NT SCAN

No. of foetuses: Single

Foetal position: Transverse lie

Foetal heart : Pulsations present, FHR -108Bpm, regular.

Placenta : Posterior/ Lower/ segment/ grade 0 maturity.
Completely covering the Os.

Amniotic fluid : adequate liquor.

BIOMETRY

CRL : 6.02cm 12w 04 d
GA by Ultrasound : 12 WEEKS 04 DAYS

EDD by Ultrasound : 07/07/2023

TARGETED IMAGING FOR FETAL ANOMALIES (TIFFA):

Head:

- * Midline falx - Normal
- Both lateral ventricles show normal symmetrical choroids plexus.

Face:

Early fetal face appears normal,
Nasal bone visualized.

N.T = 2.6mm (on higher side).

Thorax:

Heart - Position and axis normal.

Lungs - Normal.

Abdomen:

Stomach - Normal.

Bowel - Normal.

Abdominal wall - Normal.

Limbs:

Both upper and lower limbs are normal.

Foetal movements are normal.

Umbilical cord normal. vessel chord seen. Cord, insertion normal.

Cervix length. 3.5 cm Os closed. No funelling.

IMPRESSION :

1) SINGLE, VIABLE, INTRAUTERINE, FOETUS OF GESTATIONAL AGE OF 12 WEEKS 04 DAYS.

Advise second trimester TIFFA at 18 - 20 weeks.

Consultant Radiologist
Dr. Vinutha Reddy.

While ultrasound can provide very valuable information about pregnancies and can detect many abnormalities in the foetus, it cannot give a definite answer to every problem on every occasion. Ultrasound cannot guarantee that a baby will be normal in every detail. Scanning conditions may be suboptimal due to various constraints including obesity, abdominal scars and inappropiate fetal position. Even in the best hands, a small percentage of foetal anomalies, in particular certain heart and limb defects, can remain undetectable.
