Mrs SAI SRI

Date of birth : 10 April 1993, Examination date: 09 January 2023

Address: NALGONDA

Hospital no.: KFC3151

Mobile phone: 8919116211

Referring doctor: TRIVENI

Maternal / Pregnancy Characteristics:

Racial origin: South Asian (Indian, Pakistani, Bangladeshi).

Parity: 1; Deliveries at or after 37 weeks: 1.

Maternal weight: 50.0 kg; Height: 150.0 cm.

Smoking in this pregnancy: no; Diabetes Mellitus: no; Chronic hypertension: no; Systemic lupus erythematosus: no; Antiphospholipid syndrome: no; Preeclampsia in previous pregnancy: no;

Previous small baby: no; Patient's mother had preeclampsia: no.

Method of conception: Spontaneous;

Last period: 20 September 2022

EDD by dates: 27 June 2023

First Trimester Ultrasound:

US machine: E 6. Visualisation: good.

Gestational age: 12 weeks + 6 days from CRL

EDD by scan: 18 July 2023

Findings	Alive fetus
Fetal heart activity	visualised
Fetal heart rate	160 bpm
Crown-rump length (CRL)	65.0 mm
Nuchal translucency (NT)	1.1 mm
Biparietal diameter (BPD)	22.0 mm
Ductus Venosus PI	0.900
Placenta	posterior low
Amniotic fluid	normal

Chromosomal markers:

Nasal bone: can not examine; Tricuspid Doppler: normal.

Fetal anatomy:

Skull/brain: appears normal; Spine: appears normal; Heart: Appears normal; Abdominal wall: appears normal; Stomach: visible; Bladder / Kidneys: visible; Hands: both visible; Feet: both visible.

Uterine artery PI: 0.85 equivalent to 0.520 MoM

Endocervical length: 31.0 mm

Risks / Counselling:

Patient counselled and consent given.

Operator: Lekkala Kalpana, FMF Id: 173593

Condition	Background risk	Adjusted risk
Trisomy 21	1: 674	1: 3370
Trisomy 18	1: 1655	1: 5015
Trisomy 13	1: 5189	<1: 20000
Preeclampsia before 34 weeks		1: 5970

First Trimester Screening Report

Fetal Medicine and Scan Center

Fetal growth restriction before 37 weeks

The background risk for aneuploidies is based on maternal age (29 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler. All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The estimated risk is calculated by the FMF-2012 software (version 2.81) and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK Registered charity 1037116). The risk is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see www.fetalmedicine.com).

Comments

Single live intra uterine fetus corresponding to 12 weeks 6 days.

Down syndrome screen negative based on NT scan.

NASAL BONE CAN NOT EXAMINE.

Suggested DOUBLE MARKER.

Suggested TIFFA SCAN at 18 weeks. (Feb 14th to 20th)

I, Dr. L. Kalpana reddy, declared that while conducting ultrasonography / imaging scanning on Mrs. SAI SRI, I have neither detected nor disclosed the sex of fetus to any body in any manner.

DR. L. KALPANA REDDY
FETAL MEDICINE CONSULTANT
