(A unit of Insight Imaging)

...ADVANCE DIAGNOSTIC CENTRE & INTERVENTIONAL RADIOLOGY CLINIC

166, Tajshree Tower, In front of Choudhary Hospital, Sakkardara, Nagpur. | M: +91 7972595800 | 8446551606

PATIENTS NAME : MRS. KARISHMA BAKSHE
AGE : 28 YEARS/F
REFERRED BY : DR. ASHISH MADAVI
EXAMINATION : USG- NT SCAN
DATE : 24/01/2023
LMP : 27/10/2022 (12 WEEKS 5 DAYS BY LMP)

OBSERVATION:

- #> Single intrauterine gestational sac with Crown-rump length 6cm - corresponds to 12 weeks 4 days.
- #> Placenta developing anteriorly. Uniform decidual reaction. No subchorionic collection seen on present scan.
- #> Fetal movements and cardiac pulsations are well appreciated.
- #> FHR - 151 per minute. NT measures 0.9 mm. Nasal bone seen. Ductous venosus appear normal.
- #> AGA- 12 weeks, 4 days EDD by CGA: 04/08/2023
- #> Cervix appears normal, measuring 2.9 cm.
- #> Internal os is closed. No free fluid in Cul-De-Sac.
- #> Fetal skull, visualised spine and limbs appear unremarkable.
- #> Average uterine artery PI- 1.1

IMPRESSION:

Sonic features suggest single intra-uterine viable pregnancy of CRL corresponding to 12 weeks 4 days gestation.
NT measures 0.9 mm. EDD by CGA: 04/08/2023

Follow up anomaly scan at 19-22 weeks suggested.

I, Dr. Pradip Rathod declare that while conducting sonography of Pt. Karishma Bakshe, I have neither detected nor disclosed the sex of fetus to anybody in any manner or form. Note: All congenital malformations cannot be rule out at this gestational age. Detection of congenital malformation depend on the position of fetus at the time of evaluation. Some fetal anatomical structures may not be well visualised due to fetal lie and position. This scan does not include Fetal 2D Echo. Some abnormalities evolve as gestation advances and some can become apparent after birth.
