Pt NAAME : PANKARLA. DHANA LAKSHMI

AGE: 18Y/F

DATE: 28.01.2023

Ref by DR: THRIVENI MS OBG

INDICATION: TIFFA

OBSTETRIC ULTRA SOUND SCAN WITH TIFFA REPORT

Single live intrauterine gestation noted transverse presentation at the time of scan
Fetal cardiac activity noted HR = 156 BPM
Fetal movements noted
Liquor is adequate, clear
Placenta is anterior grade - I maturity lower segment
No e/o cord around the neck noted

FOETAL BIOMETRY

BPD	:	4.54 cm	19 wks 5 days
HC	:	17.09 cm	19 wks 5 days
AC	:	14.99 cm	20 wks 2 days
FL	:	2.89cm	18 wks 6 days
CGA	:	19 weeks 4 days	
EDD	:	20/06/ 2023	
BW	:	303 gm +/- 44 gm	
CX	:	3.0 cm with TVS ,internal os normal	

Continue---

Note : The science of the radiological diagnosis is based on the interpretation of various shadows produced by both normal & abnormal tissue. Dissimilar diverse diseases produce similar shadows, hence this report is not for confirmation for the diagnosis and only represents part of professional opinion in some of the various possibilities and number of variables known & unknown does exist.

Stomach bubble seen at left hypo chondrium with normal situs
Abdominal wall intact
Kidneys, bladder are normal
3 vessel cord with normal insertion noted

Spine: Normal

Extremities: Upper limbs & lower limbs are grossly appear normal

Both uterine arteries show normal colour flow & spectral pattern. No e/o end diastolic notches

IMPRESSION:

~Single live intrauterine gestation of 19 weeks 4 days gestational age +/- 2 weeks
With no obvious anomalies

Advised follow up scans in R/O progressive anomalies
Advised fetal echo

DR. R. APARNA
RADIOLOGIST

(Dr. R. APARNA declare that while conducting USG on P. DHANA LAKSHMI 18 Y.F. I have neither detected nor disclosed the sex of the fetus to anybody in any manner. Determination of fetal sex is illegal (section PNODT ACT 1994).

Note: Despite of sincere search all anomalies cannot be ruled out by ultra sound, since assessment of fetal anomalies depends on fetal position, liquor volume, maternal obesity and period of gestation at the time of scan. In BOH with HTN Doppler studies are helpful in evaluating IUGR & viability. All GIT abnormalities & small VSD, ASD, PDA cannot be ruled out with this scan.

Note: The scan is not a diagnostic tool and does not provide a definitive answer. It is a screening tool. Various shadows produced by both normal & abnormal tissue. Distinctly diverse diseases produce similar shadows, hence this report is not for confirmation for the diagnosis and only represents part of professional opinion in some of the various possibilities and number of variables known & unknown does exist.
