డా. మూల అపర్నా రెడ్డి
Reg. No. 51278

PTS NAME : ASBEFA AGE : 25 Y/F DATE : 05/02/2023

REF BY DR : TRIVENI MS OBG

EARLY OBG SCAN WITH NT

Uterus : bulky with single regular gestational sac
Yolk sac present.
Fetal pole present.
Fetal movements present.
Fetal cardiac activity present FHR : 152 BPM.

Placenta posterior grade 0 lower segment

CRL : 4.21 cm 11 weeks 1 days
EDD : 26/08/2023
NT : 0.90 mm
Nasal bone : 0.18 cm
CX : 3.4 cm

Visualised fetal parts appear normal

Ductus venous doppler show normal forward wave form with spectral pattern without reversal.

Tricuspid shows normal forward flow no regurgitation

Both uterine arteries show normal colour flow & spectral pattern.
E /o end diastolic notches seen ? physiological

Impression : Early gestation of 11 weeks 1 days gestational age with normal NT and normal DV,TV, Uterine arteries spectral forms

Advised double marker

DR. APARNA
RADIOLOGIST

I Dr. APARNA declare that while conducting USG on ASBEFA 25 Y/F

I have neither detected nor disclosed the sex of the fetus in any manner

Note: all anomalies cannot be ruled out by ultra sound, as assessment of fetal anomalies depends on fetal position, liquor volume and period of gestation at the time of scan. USG has its own limitations. Please correlate clinically. Thanks for referral

Note : The science of the radiological diagnosis is based on the interpretation of various shadows produced by both normal & abnormal tissue. Dissimilar diverse shadows produce similar shadows, hence this report is not for confirmation for the diagnosis and only represents part of professional opinion on some of the various possibilities and number of variables known & unknown does exist.
