MRI SCAN OF PELVIS with screening of the abdomen. – REPORT

There is no mass lesion in the urinary bladder.

There is a large well defined thin walled cystic lesion measuring about 3.1 x 3.5 cm arising from the right ovary. Few thin internal septations within the cyst. Hemorrhage within the cyst noted. There is no solid component associated with a cyst. This is a benign ovarian cyst. Left ovary appears normal. No mass seen in the left ovary left adnexal region.

Small amount of free fluid seen in the pelvis.

Uterus is normal in size .No fibroid seen. Endometrium appears normal.

Visualized ureters are normal in course and calibre. Periureteral fat planes are intact.

There is no evidence of pelvic lymphadenopathy .

Visualized vertebral bodies do not show any sclerotic or lytic lesion.

Liver, gallbladder, spleen, pancreas, both kidneys appear normal. No intra-abdominal lymphadenopathy seen.

Thank you for the referral
