PTS NAME : CH NAVYA AGE : 20Y/F DATE : 28.02.2023

REF BY DR : Y. JYOTHI MBBS DGO

EARLY OBG SCAN WITH NT

Uterus : bulky with single regular gestational sac
Yolk sac present
Fetal pole present
Fetal movements present
Fetal cardiac activity present FHR : 144 BPM.

Placenta left lateral grade 0 lower segment
14 weeks 2 days

CRL	8.38 cm
EDD	27/08/2023
NT	0.90 mm
Nasal bone	0.21 cm
CX	3.0 cm

Visualised fetal parts appear normal

Ductus venous doppler show normal forward wave form with spectral pattern without reversal

Tricuspid shows normal forward flow no regurgitation

Both uterine arteries show normal colour flow & spectral pattern.
E/o end diastolic notches seen ? physiological

Impression : Early gestation of 14 weeks 2 days gestational age with normal
NT and normal DV, TV, Uterine arteries spectral forms

Advised double marker

DR. RAPARNA
RADIOLOGIST

I Dr. RAPARNA declare that while conducting USG on CH NAVYA 20 Y/F
I have neither detected nor disclosed the sex of the fetus to anybody in any manner.

Note: all anomalies cannot be ruled out by ultrasound, since assessment of fetal anomalies depends on fetal position, liquor
volume and period of gestation at the time of scan. USG has its own limitations. Please correlate clinically. Thanks for referral

Note : The science of the radiological diagnosis is based on the interpretation of various shadows produced by both
normal & abnormal tissue. Dissimilar diverse diseases produce similar shadows, hence this report is not for
confirmation for the diagnosis and only represents part of professional opinion in some of the various
possibilities and number of variables known & unknown does exist.
