Patient data			
Name	Mrs. PRIYANKA ATUL BADE		Patient ID
Birthdate	01-07-1995		Sample ID
Age at sample date	27.7		Sample Date
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	50	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		unknown	
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.09 mIU/mL	0.66	12 + 3
fb-hCG	47.12 ng/mL	1.03	Method
Risks at sampling date			CRL Robinson
Age risk	1:815		Scan date
Biochemical T21 risk	1:1783		27-02-2023
Combined trisomy 21 risk	1:9945		Crown rump length in mm
Trisomy 13/18 + NT	<1:10000		62
			Nuchal translucency MoM
			0.50
			Nasal bone
			present
			Sonographer

Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 9945 women with the same data, there is one woman with a trisomy 21 pregnancy and 9944 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
