

SANKALPA HOSSPITAL

Patient data					
Name	Mrs. PALLAVI		Patient ID	0312303150037	
Birthday	21/04/96		Sample ID	24031626	
Age at sample date	26.9		Sample Date	15/03/23	
Gestational age	12 + 1				
Correction factors					
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	55	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	11 + 6	
PAPP-A	1.39 mIU/mL	0.37	Method	CRL Robinson	
fb-hCG	43.88 ng/mL	0.93	Scan date	13/03/23	
Risks at sampling date			Crown rump length in mm	54	
Age risk	1:854		Nuchal translucency MoM	0.70	
Biochemical T21 risk	1:509		Nasal bone	present	
Combined trisomy 21 risk	1:3259		Sonographer	SANKALPA HOSSPITAL	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 3259 women with the same data, there is one woman with a trisomy 21 pregnancy and 3258 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
