

Prisca

5.1.0.17

Date of report:

23/03/23

Patient data				
Name	Mrs. GEETHA W/O. NAGENDHAR		Patient ID	0312303210050
Birthday	12/09/96		Sample ID	24031755
Age at sample date	26.5		Sample Date	21/03/23
Gestational age	13 + 2			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	92	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	13 + 1
PAPP-A	1.22 mIU/mL	0.39	Method	CRL Robinson
fb-hCG	36.55 ng/mL	1.20	Scan date	20/03/23
Risks at sampling date			Crown rump length in mm	72
Age risk	1:910		Nuchal translucency MoM	0.67
Biochemical T21 risk	1:363		Nasal bone	unknown
Combined trisomy 21 risk	1:2371		Sonographer	NA
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2371 women with the same data, there is one woman with a trisomy 21 pregnancy and 2370 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
