Mean Uterine artery P.I.=0.67

OPINION : USG obstetrics Level II (Target) scan reveals :

- Single intra-uterine live fetus of MGA 25 weeks 2 days , without any apparent congenital anomaly. ✓
- Atria of lateral ventricle measuring 9.7mm(along lower limit of normal).- Adv.-Follow up.

Advice : QUAD Test is advised as a comprehensive approach for evaluation / screening of fetal congenital anomalies.

Note : - Level II scan does not rule out all cardiac flow defects. If suspected then fetal echocardiography / fetal cardiac Doppler is required for further evaluation.

Level II scan also does not rule out all anomalies of extremities, specially of hand & foot.
