First Trimester Screening Report

Kalpana Fetal Medicine and Scan Center

Protecting the Precious...

MRS NIKHITHA

Date of birth : 20 August 1989, Examination date: 24 March 2023

Address: CHOUTPAL

Hospital no.: KFC8490

Mobile phone: 9949670920

Referring doctor: TRIVENI

Maternal / Pregnancy Characteristics:

Racial origin: South Asian (Indian, Pakistani, Bangladeshi).

Parity: 1; Deliveries at or after 37 weeks: 1.

Maternal weight: 84.0 kg; Height: 152.0 cm.

Smoking in this pregnancy: no; Diabetes Mellitus: no; Chronic hypertension: no; Systemic lupus erythematosus: no; Antiphospholipid syndrome: no; Preeclampsia in previous pregnancy: no;

Previous small baby: no; Patient's mother had preeclampsia: no;

Method of conception: Spontaneous;

Last period: 19 December 2022

EDD by dates: 25 September 2023

First Trimester Ultrasound:

US machine: E 6. Visualisation: poor.

Gestational age: **12 weeks + 3 days** from CRL

EDD by scan: 03 October 2023

Findings	Alive fetus
Fetal heart activity	visualised
Fetal heart rate	151 bpm
Crown-rump length (CRL)	60.0 mm
Nuchal translucency (NT)	2.6 mm
Biparietal diameter (BPD)	21.0 mm
Placenta	posterior low
Amniotic fluid	normal

Chromosomal markers:

Nasal bone: present; Tricuspid Doppler: normal.

Fetal anatomy:

Skull/brain: appears normal; Spine: appears normal; Heart: Appears normal; Abdominal wall: appears normal; Stomach: visible; Bladder / Kidneys: visible; Hands: both visible; Feet: both visible.

Uterine artery PI:	2.00	equivalent to 1.260 MoM
Endocervical length:	33.0 mm	

Risks / Counselling:

Patient counselled and consent given.

Operator: Lekkala Kalpana, FMF Id: 173593

Condition	Background risk	Adjusted risk
Trisomy 21	1: 364	1: 317
Trisomy 18	1: 872	1: 1651
Trisomy 13	1: 2741	1: 6199
Preeclampsia before 34 weeks		1: 191
Fetal growth restriction before 37 weeks		1: 186

Ultrasonography Report

Fetal Medicine and Scan Center

Protecting the Pregnant...

The background risk for aneuploidies is based on maternal age (33 years). The adjusted risk is the risk at the time of screening, calculated on the basis of the background risk and ultrasound factors (fetal nuchal translucency thickness, nasal bone, fetal heart rate).

Risks for preeclampsia and fetal growth restriction are based on maternal demographic characteristics, medical and obstetric history and uterine artery Doppler. All biophysical markers are corrected as necessary according to several maternal characteristics including racial origin, weight, height, smoking, method of conception and parity.

The estimated risk is calculated by the FMF-2012 software (version 2.81) and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK Registered charity 1037116). The risk is only valid if the ultrasound scan was performed by a sonographer who has been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see www.fetalmedicine.com).

Comments

Single live intra uterine fetus corresponding to 12 weeks 3 days.

Down syndrome screen negative based on NT scan.

NT falls more than 95th centile for the period of gestation.

Ductus venosus not able image.

Suggested DOUBLE MARKER.

Suggested TIFFA SCAN at 16 weeks. (April 19th to 20th)

I, Dr. L. Kalpana Reddy, declared that while conducting ultrasonography / imaging scanning on Mrs. NIKHITHA, I have neither detected nor disclosed the sex of fetus to any body in any manner.

DR. L. KALPANA REDDY
