

Prisca

5.1.0.17

Date of report:

25/03/23

Patient data					
Name	Mrs. JYOTHI FETUS-B		Patient ID	0012303250300	
Birthday	23/03/03		Sample ID	23603585	
Age at sample date	20.0		Sample Date	25/03/23	
Gestational age	12 + 3				
Correction factors					
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	46	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	12 + 2	
PAPP-A	3.5 mIU/mL	0.36	Method	CRL Robinson	
fb-hCG	52.65 ng/mL	0.52	Scan date	24/03/23	
Risks at sampling date			Crown rump length in mm	59	
Age risk	1:1085		Nuchal translucency MoM	1.06	
Biochemical T21 risk	1:2036		Nasal bone	unknown	
Combined trisomy 21 risk	1:7918		Sonographer	NA	
Trisomy 13/18 + NT	1:7558		Qualifications in measuring NT	MD	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 7918 women with the same data, there is one woman with a trisomy 21 pregnancy and 7917 women with not affected pregnancies. The PAPP-A level is low. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:7558, which represents a low risk.
