Dr. ANITA SHRIVASTAVA

M.S.

Ph. 9425079184

Patient's Name:- SMT. HUMA
Ref. by:- DR. ANITA SHRIVASTAVA (MS)

Age/Sex :- 35Y/F
DATE :- 04/04/2023

TARGET SCAN FOR FOETAL CONGENITAL ANOMALIES

Head :-

- Head appears normal in size and shape.
- Both lateral ventricles appear normal. Maximum transverse diameter at atrium of LV level measures 7.8 mm in right and 8.0 mm in left half.
- Midline echoes appear normal.
- Cerebellum appears normal.
- Cisterna magna measures 8.3 mm (Normal is 10.0 mm)
- No SOL (space occupying lesion) is seen in cerebral parenchyma.
- Normally seen foetal choroid plexuses and vermis.
- Normal craniovertebral junction observed.

Neck :-

- No cystic lesion is visible around the foetal neck.
- Foetal face was visualized in profile and coronal scans.
- Both eyeballs and nose appears normal.
- Nasal bone was well visualized.
- Nuchal fold is 4.5 mm thick (Normal < 6 mm).
- No neck mass observed.
- No evidence of any obvious cleft lip or cleft palate noted.

Thorax :-

- Normal cardiac situs and position.
- Four chambers view appear normal.
- Both lungs were visualized.
- No evidence of pleural or pericardial effusion.
- No SOL (space occupying lesion) in thorax.
- Cardiac out-flow tracts are seen normally.
- Diaphragms are seen normally with no evident herniation into the thorax.
